Mr. Thomas Williams, PM, IEPA
Mr. Terry Ayers, IEPA

CURRENT MONTH PROJECT ISSUES/STATUS: (*activities, meetings, deliverables, etc.*)
The field work (off-site pre-design investigation) is proceeding based on access being secured with the assistance of the USEPA. Most of the efforts during the months of December 2003 and January 2004 were spent in attempting to secure off-site access to the two southern properties (DRB Buildings, 2525 11th Street and Rockford Products parking lot). The USEPA was asked to assist Hamilton Sundstrand in obtaining access agreements for these properties after it appeared that negotiations conducted to date by SECOR and Hamilton Sundstrand had stalled.

During the later part of December 2003 and January 2004, all of the wells that have been installed and those existing wells that were to be included in the round of groundwater sampling were developed or re-developed. Water levels were recorded along with other general groundwater characteristic data during these development activities. Two existing wells located in the South Alley portion of the Hamilton Sundstrand facility were observed to exhibit the presence of light non-aqueous phase liquid (LNAPL). The LNAPL present appeared to be petroleum in nature. The two wells that exhibited the LNAPL were RW-3 and RW-1. These wells are recovery wells that were originally installed to collect a historic reported release of jet fuel from underground storage tanks and/or piping formerly located in the South Alley. RW-3, located at the eastern end of the South Alley, presented 0.60 feet of LNAPL. RW-1, located to the west of RW-3, presented 0.03 feet of LNAPL.

These recovery wells are part of the LNAPL recovery system that was installed several years ago after the underground storage tank removals and reported release of jet fuel in the South Alley (circa 1991). The system has been maintained and modified over the years

(1996/1997). Gauging of these wells by SECOR during early and mid 2003 did not identify the presence of LNAPL in any of the recovery wells. It was noted at the time that these wells were monitored that the recovery pumps were operational. During the week ending January 16, 2004, the pumps were not in operation. The recovery pumps are air driven density skimmer type pumps. The air lines to the pumps were operational; however, the discharge lines from the pumps were clogged with ice. Also, based on trending and seasonal lowering of the water table, it appeared that the pumps were not set at the optimal depths to efficiently collect any LNAPL present. These two conditions along with some other pump maintenance items provided the conditions likely responsible for the expression of the petroleum LNAPL.

The existing system has been operated by Hamilton Sundstrand plant maintenance staff. Based on the design and operation, this system was difficult to monitor and assess performance. Currently, steps have been and are being undertaken to return the existing system to operation. Also, alternative LNAPL pump systems and monitoring capabilities are being evaluated to up-grade the existing system. The concept is to move forward to address this situation, with agency acknowledgement, in the South Alley in a timely fashion.

The LNAPL discovery was relayed to USEPA in memorandum dated January 22, 2004. Based on further discussions with the USEPA, the observed LNAPL presence indicates that some additional assessment on the DRB Buildings property to the south of RW-3 and RW-1 will be warranted to determine the extent of the LNAPL in this area. This will be undertaken in the form of additional investigation points (soil boring and monitoring wells).

All laboratory analytical data received to date has been submitted for validation to an independent third party. Validation is being conducted in accordance with the QAPP(s) approved by the USEPA.

Investigation derived wastes (IDWs) from the OSA (former RCRA storage unit) were profiled and ultimately removed from the site for disposal. The IDWs from this area were managed as hazardous wastes in accordance with the RD Work Plan. There were two IDW streams generated from the OSA: solid/soils and liquids. The soils were the result of drilling activities for sample collection and pilot testing point installation. Liquid IDW was the result of decontamination and pilot testing activities in the OSA. Disposal of these IDWs was performed by Clean Harbors.

IDWs from areas other than the OSA are being managed as non-hazardous wastes based on laboratory characterization. These materials are being stored on-site in appropriate covered/closed containers in a secured area of the site pending off-site disposal.

FUTURE PROJECT ISSUES/STATUS: (*activities, meetings, deliverables, etc.*)

Since access was obtained, the GPR/EM survey had been scheduled to be performed on the Rockford Products parking lot in accordance with the RD Work Plan. The survey is to be

Page 3

undertaken during the first week of February 2004. This effort will aid in the location selection of the additional monitoring wells and soil borings for this area (vicinity of MW-201). Also, during the survey, attempts will be made to determine the location of the "original" MW-201.

Upon completion of the GPR/EM survey and evaluation of that data, the final sampling locations for the remaining soil borings and monitoring wells will be selected for this area. The location of the "original" MW-201 will be a key factor in final placement of these locations.

The originally proposed and additional sampling locations for the DRB Buildings property to the south are to be advanced during February 2004. The additional sampling locations (soil borings and monitoring wells) will be used to determine the extent of the LNAPL discovered in the existing wells (RW-3 and RW-1) in the South Alley.

SAMPLE/TEST DATA SUBMITTALS:

Raw sample data (laboratory analytical results) from the pilot testing activities conducted in late November 2003 and early December 2003 have been included with this memorandum. These data consist of the results of soil gas and other vapor samples and groundwater quality samples collected during the vapor extraction and air-sparging pilot testing activities. This data package is comprised of a table/list of the various samples and their respective analyses followed by the individual data report packets. With this data submittal, all raw analytical laboratory results for all samples collected to date have been forwarded to USEPA.

RD SCHEDULE UPDATE: (*attach updated schedule as necessary*)

The field sampling activities associated with the pre-design investigation are continuing with the performance of site soil boring and monitoring well installation on the off-site properties to the south of the Hamilton Sundstrand facility. Off-site access issues have delayed the initiation of these southern investigation efforts. In addition, the identification of the presence of petroleum LNAPL in two wells in the South Alley will warrant additional investigation points. Hamilton Sundstrand will continue to work with USEPA on keeping the Remedial Design efforts for Area 9/10 moving forward in an expeditious and reasonable fashion.

REALIZED/ANTICIPATED PROBLEM CONDITIONS:

Access to 2525 11th Street had been slow in coming. As well, what was deemed to be a completed access issue for the Rockford Products parking lot had become stalled, administratively. The USEPA was asked to assist Hamilton Sundstrand in securing access to these properties. Based on communications by the USEPA, access to both properties was secured during the month of January 2004.

PERSONNEL CHANGES:

None.

Report Date: 12/29/2003

REPORT COMMENTS

- 1) All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.
- 2) Soil, sediment and sludge sample results are reported on a "dry weight" basis except when analyzed for landfill disposal or incineration parameters. All other solid matrix samples are reported on an "as received" basis unless noted differently.
- 3) Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.
- 4) The test results for the noted analytical method(s) meet the requirements of NELAC. Lab Cert. ID# 100201
- 5) According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH Field) they were not analyzed immediately, but as soon as possible on laboratory receipt.

Glossary of flags, qualifiers and abbreviations (any number of which may appear in the report)

Inorganic Qualifiers (Q-Column)

- U Analyte was not detected at or above the stated limit.
< Not detected at or above the reporting limit.
J Result is less than the RL, but greater than or equal to the method detection limit.
B Result is less than the CRDL/RL, but greater than or equal to the IDL/MDL.
S Result was determined by the Method of Standard Additions.
F AFCEE: Result is less than the RL, but greater than or equal to the method detection limit.

Inorganic Flags (Flag Column)

- ^ ICV,CCV,ICB,CCB,ISA,ISB,CRI,CRA,MRL: Instrument related QC exceed the upper or lower control limits.
* LCS, LCD, MD: Batch QC exceeds the upper or lower control limits.
+ MSA correlation coefficient is less than 0.995.
4 MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
E SD: Serial dilution exceeds the control limits.
H MB, EB1, EB2, EB3: Batch QC is greater than reporting limit or had a negative instrument reading lower than the absolute value of the reporting limit.
N MS, MSD: Spike recovery exceeds the upper or lower control limits.
W AS(GFAA) Post-digestion spike was outside 85-115% control limits.

Organic Qualifiers (Q - Column)

- U Analyte was not detected at or above the stated limit.
ND Compound not detected.
J Result is an estimated value below the reporting limit or a tentatively identified compound (TIC).
Q Result was qualitatively confirmed, but not quantified.
C Pesticide identification was confirmed by GC/MS.
Y The chromatographic response resembles a typical fuel pattern.
Z The chromatographic response does not resemble a typical fuel pattern.
E Result exceeded calibration range, secondary dilution required.
F AFCEE:Result is an estimated value below the reporting limit or a tentatively identified compound (TIC)

Organic Flags (Flags Column)

- B MB: Batch QC is greater than reporting limit.
* LCS, LCD, ELC, ELD, CV, MS, MSD, Surrogate: Batch QC exceeds the upper or lower control limits.
^ EB1, EB2, EB3, MLE: Batch QC is greater than reporting Limit
A Concentration exceeds the instrument calibration range
a Concentration is below the method Reporting Limit (RL)
B Compound was found in the blank and sample.
D Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution will be flagged with a D.
H Alternate peak selection upon analytical review
I Indicates the presence of an interference, recovery is not calculated.
M Manually integrated compound.
P The lower of the two values is reported when the % difference between the results of two GC columns is

QUALITY ASSURANCE METHODS

ELD	Method Extracted LCD
ICAL	Initial calibration
ICB	Initial Calibration Blank
ICV	Initial Calibration Verification
IDL	Instrument Detection Limit
ISA	Interference Check Sample A - ICAP
ISB	Interference Check Sample B - ICAP
Job No.	The first six digits of the sample ID which refers to a specific client, project and sample group Lab ID An 8 number unique laboratory identification
LCD	Laboratory Control Standard Duplicate
LCS	Laboratory Control Standard with reagent grade water or a matrix free from the analyte of interest
MB	Method Blank or (PB) Preparation Blank
MD	Method Duplicate
MDL	Method Detection Limit
MLE	Medium Level Extraction Blank
MRL	Method Reporting Limit Standard
MSA	Method of Standard Additions
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not Detected
PREPF	Preparation factor used by the Laboratory's Information Management System (LIMS)
PDS	Post Digestion Spike (ICAP)
RA	Re-analysis of original
A1	Re-analysis of D1
A2	Re-analysis of D2
A3	Re-analysis of D3
RD	Re-extraction of dilution
RE	Re-extraction of original
RC	Re-extraction Confirmation
RL	Reporting Limit
RPD	Relative Percent Difference of duplicate (unrounded) analyses
RRF	Relative Response Factor
RT	Retention Time

REPORT COMMENTS

- 1) All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.
- 2) Soil, sediment and sludge sample results are reported on a "dry weight" basis except when analyzed for landfill disposal or incineration parameters. All other solid matrix samples are reported on an "as received" basis unless noted differently.
- 3) Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.
- 4) The test results for the noted analytical method(s) meet the requirements of NELAC. Lab Cert. ID# 100201
- 5) According to 40CFR Part 136.3, pH, Chlorine Residual and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH Field) they were not analyzed immediately, but as soon as possible on laboratory receipt.

Glossary of flags, qualifiers and abbreviations (any number of which may appear in the report)

Inorganic Qualifiers (Q-Column)

- U Analyte was not detected at or above the stated limit.
< Not detected at or above the reporting limit.
J Result is less than the RL, but greater than or equal to the method detection limit.
B Result is less than the CRDL/RL, but greater than or equal to the IDL/MDL.
S Result was determined by the Method of Standard Additions.
F AFCEE: Result is less than the RL, but greater than or equal to the method detection limit.

Inorganic Flags (Flag Column)

- ^ ICV,CCV,ICB,CCB,ISA,ISB,CRI,CRA,MRL: Instrument related QC exceed the upper or lower control limits.
* LCS, LCD, MD: Batch QC exceeds the upper or lower control limits.
+ MSA correlation coefficient is less than 0.995.
4 MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
E SD: Serial dilution exceeds the control limits.
H MB, EB1, EB2, EB3: Batch QC is greater than reporting limit or had a negative instrument reading lower than the absolute value of the reporting limit.
N MS, MSD: Spike recovery exceeds the upper or lower control limits.
W AS(GFAA) Post-digestion spike was outside 85-115% control limits.

Organic Qualifiers (Q - Column)

- U Analyte was not detected at or above the stated limit.
ND Compound not detected.
J Result is an estimated value below the reporting limit or a tentatively identified compound (TIC).
Q Result was qualitatively confirmed, but not quantified.
C Pesticide identification was confirmed by GC/MS.
Y The chromatographic response resembles a typical fuel pattern.
Z The chromatographic response does not resemble a typical fuel pattern.
E Result exceeded calibration range, secondary dilution required.
F AFCEE:Result is an estimated value below the reporting limit or a tentatively identified compound (TIC)

Organic Flags (Flags Column)

- B MB: Batch QC is greater than reporting limit.
* LCS, LCD, ELC, ELD, CV, MS, MSD, Surrogate: Batch QC exceeds the upper or lower control limits.
^ EB1, EB2, EB3, MLE: Batch QC is greater than reporting Limit
A Concentration exceeds the instrument calibration range
a Concentration is below the method Reporting Limit (RL)
B Compound was found in the blank and sample.
D Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution will be flagged with a D.
H Alternate peak selection upon analytical review
I Indicates the presence of an interference, recovery is not calculated.
M Manually integrated compound.
P The lower of the two values is reported when the % difference between the results of two GC columns is

QUALITY ASSURANCE METHODS

greater than 25%.

Abbreviations

AS	Post Digestion Spike (GFAA Samples - See Note 1 below)
Batch	Designation given to identify a specific extraction, digestion, preparation set, or analysis set
CAP	Capillary Column CCB Continuing Calibration Blank
CCV	Continuing Calibration Verification
CF	Confirmation analysis of original
C1	Confirmation analysis of A1 or D1
C2	Confirmation analysis of A2 or D2
C3	Confirmation analysis of A3 or D3
CRA	Low Level Standard Check - GFAA; Mercury
CRI	Low Level Standard Check - ICP
CV	Calibration Verification Standard
Dil Fac	Dilution Factor - Secondary dilution analysis
D1	Dilution 1
D2	Dilution 2
D3	Dilution 3
DLFac	Detection Limit Factor
DSH	Distilled Standard - High Level
DSL	Distilled Standard - Low Level
DSM	Distilled Standard - Medium Level
EB1	Extraction Blank 1
EB2	Extraction Blank 2
EB3	DI Blank
ELC	Method Extracted LCS
ELD	Method Extracted LCD
ICAL	Initial calibration
ICB	Initial Calibration Blank
ICV	Initial Calibration Verification
IDL	Instrument Detection Limit
ISA	Interference Check Sample A - ICAP
ISB	Interference Check Sample B - ICAP
Job No.	The first six digits of the sample ID which refers to a specific client, project and sample group Lab ID An 8 number unique laboratory identification
LCD	Laboratory Control Standard Duplicate
LCS	Laboratory Control Standard with reagent grade water or a matrix free from the analyte of interest
MB	Method Blank or (PB) Preparation Blank
MD	Method Duplicate
MDL	Method Detection Limit
MLE	Medium Level Extraction Blank
MRL	Method Reporting Limit Standard
MSA	Method of Standard Additions
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ND	Not Detected
PREPF	Preparation factor used by the Laboratory's Information Management System (LIMS)
PDS	Post Digestion Spike (ICAP)
RA	Re-analysis of original
A1	Re-analysis of D1
A2	Re-analysis of D2
A3	Re-analysis of D3
RD	Re-extraction of dilution
RE	Re-extraction of original
RC	Re-extraction Confirmation
RL	Reporting Limit
RPD	Relative Percent Difference of duplicate (unrounded) analyses
RRF	Relative Response Factor
RT	Retention Time

F43DC	006	PT-FBVE02-01	11/17/03	16:48

NOTE(S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

NOTE(S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.
